

## **Best Practices for Improving Learning Through Technology:**

- Increase student voice.
- Expect professional quality products from students.
- Focus the classroom around the student-learner through differentiation. Offer varied methods of engaging content, processes, and products.
- Expand the walls of the classroom make students' world bigger through collaborations with students in other places.
- Increase student ownership of process, products, and content.
- Enhance ability of teacher to be a coach / facilitator.
- Incorporate teacher web page into class routine by making it a resource that students need in order to succeed in class.
- Sharpen students' writing skills.
- Foster relevance of curriculum to the lives of our students through authentic, high-stakes learning.
- Involve students in curricular choices.
- Establish clear objectives in order to assess content, process and product.
- Make the use of technology necessary for success in the classroom and increase computer literacy in students and faculty.
